

The support inbox that never lets an emergency hide in the pile.

Every email your customers send lands in one place, gets read and prioritized the moment it arrives, and shows up on one screen — with the truly urgent ones impossible to miss.

Why it matters: the average support team loses urgent requests inside a wall of routine ones — not because anyone is careless, but because a human has to read all of them to find the one that can't wait. Triage reads every message first, so your team's attention goes where it's actually needed, the moment it's needed.

WHAT IT DOES

Sorts every incoming customer email by urgency and topic the instant it arrives, and puts it in front of the right person on a single live screen.

WHO NEEDS IT

Small support teams handling unpredictable email volume with shared inboxes and no dedicated triage staff.

Nothing urgent goes unseen

True emergencies are flagged and surfaced the moment they land — not whenever someone happens to scroll past them.

Faster first response

No one has to manually scan a shared inbox to figure out what matters most right now.

Sent to the right person

Each message reaches the teammate suited to that topic, instead of sitting until someone claims it.

Nothing lost between shifts

A full, searchable history means the next shift always knows exactly where things stand.
